

Solution Requirements

Date	15 July 2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Step 1: Functional Requirements (FR)

Requirement		
S.No	Requirement Description	Priority
Category		
1	Users should be able to securely access the system through Authentication login/identity verification. Customer details and application High information must be protected.	
2	Customer users can submit applications and view prediction Authorization Levels results. Admin/Bank employees can manage customer data, High monitor predictions, and update records.	
3	The system should connect with external services such as credit External Interfaces score databases, banking APIs, and customer information Medium systems for collecting required data.	
4	The system should process credit card applications by accepting Transaction user details, validating information, analyzing data, and High Processing generating approval predictions.	
5	The system should generate reports such as approval rate, Reporting rejected applications, customer risk analysis, and prediction Medium accuracy reports.	
6	The system should evaluate factors such as income, age, Business Rules, etc. employment status, credit history, and existing loans to predict High approval probability.	
7	Compliance to Laws The system must follow data privacy regulations and ensure High or Regulations secure handling of sensitive customer financial information.	
	The system should provide approval probability scores and	

8 Other recommendations to improve eligibility if the application is Medium rejected.

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance
			Criteria
2	Performance & Speed	The system should quickly process Prediction result displayed 1 customer details and generate approval predictions.	within 2–3 seconds.
	Scalability	The system should support Supports thousands of user increasing numbers of customers, applications without performance degradation.	
3	Security & Data	Customer financial and personal data should be securely stored using	Data encryption and secure authentication must be
	Privacy	encryption and access control mechanisms.	implemented.
4	Reliability	The system should provide & continuous service with minimal	99% system availability with
	Availability	failures and maintain accurate proper backup and recovery. predictions.	
5	Usability	The interface should be simple, user- friendly, and accessible for different application submission easily	Users should complete
	Accessibility	& types of users.	with minimal guidance.
6	Other	The system should be easy to (Maintainability & update, maintain, and deploy on modifications and future Portability) different platforms. enhancements.	Modular design allowing easy
