Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	No
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	yes

10	Demo video or walkthrough (if required)	No
----	---	----

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

CreditCardApprovalPrediction/

```

|
├── app.py
├── model_training.py
├── generate_dataset.py
├── requirements.txt
├── README.md
├── credit_card_model.pkl
|
├── dataset/
|   └── credit_card.csv
|
├── static/
|   └── style.css
|
├── templates/
|   ├── index.html
|   └── result.html
|
└── screenshots/
    ├── home_page.png
    ├── prediction_page.png
    └── result_page.png
  
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	https://creditcardapprovalpredicton-1.onrender.com
Login Credentials (Demo)	No login required
Platform / Hosting Provider	Render

Repository Link	https://github.com/KammarapalliMeghana/CreditCardApprovalPredicton
Demo Video Link	

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

1. Clone the repository

```
git clone https://github.com/KammarapalliMeghana/CreditCardApprovalPredicton.git
```

2. Move into the project folder

```
cd CreditCardApprovalPredicton
```

3. Install dependencies

```
pip install -r requirements.txt
```

4. Train the model

```
python model_training.py
```

5. Run the Flask application

```
python app.py
```

6. Open in browser

```
http://127.0.0.1:5000/
```

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Model accuracy depends on dataset quality and size.	Use a larger real-world dataset for better predictions.
2	Application does not store prediction history.	Future enhancement using a database.
3	No user authentication or login module.	Can be added in future versions.
